ClinicalKey Quick Tip: Scoped Search

Need to find specific information within a piece of content? Use ClinicalKey's Scoped Search.

- **Scoped Search** is available from the search bar on any page, and can be used to filter your search by a selected content type. Simply select the content type you want from the drop-down menu and run your search in ClinicalKey.

- **Scoped Search** can also be used to find information within a piece of content. After you’ve ran a search, navigate to the piece of content you are interested in. Once you are in the content reader, type in your desired phrase or keyword in the search bar.
Select an option from the drop down menu before executing your new search.

- Click **This Page** to search for a topic within your current content reader.
- If reviewing a journal article, select **This Issue** or **This Journal** to further extend the search.
- If reading a book chapter, you may choose **This Page** or **This Book**.

By choosing **This Page** and clicking the magnifying glass, ClinicalKey will now find any instances where the new keyword or phrase appears in the content reader.

ClinicalKey will automatically bring you to the first instance where the keyword or phrase can be found. If multiple instances exist, click next in the search bar to continue on.

The Scoped Search feature is a great way to find answers quickly and to maximize your ClinicalKey experience!
