Free and online since 1997

Trip began in 1997 as a tool to improve the speed at which the founders (Jon Brassey and Dr Chris Price) could answer clinical questions using the principles of evidence-based healthcare. The remit then, as now, is to help users find quick answers to their questions using the best available evidence. Trip has been searched over 100 million times from around the world and research has shown that clinicians find answers to their questions over 70% of the time. There is no doubt that Trip is useful and has had a massive impact on global healthcare.

The site continues to be at the cutting edge of innovation. This innovation is stimulated by our continued work in clinical Q&A as well as a strong advisory board, the input of many of our nearly 100,000 registered users and numerous links with academic centres.

Trip is a UK-based limited company (incorporated in 2001) and free from external influence by pharma, governments or other large institutions. We are proudly and passionately independent. In addition to search we offer numerous other evidence services ranging from clinical question answering to rapid reviews and consultancy. In fact, we like getting involved in any interesting project, so if you need any external support we'll be happy to try to help.

This leaflet has been produced with the generous support of:

Fast Facts
the ultimate medical handbook series

Refreshingly readable well-illustrated guides to best practice. The latest research interpreted by world experts. Loved by doctors, nurses and students.
